

# DEMS(Web Service) Design Documentation

StudentID: 40092514 Name: Wenhui Guo

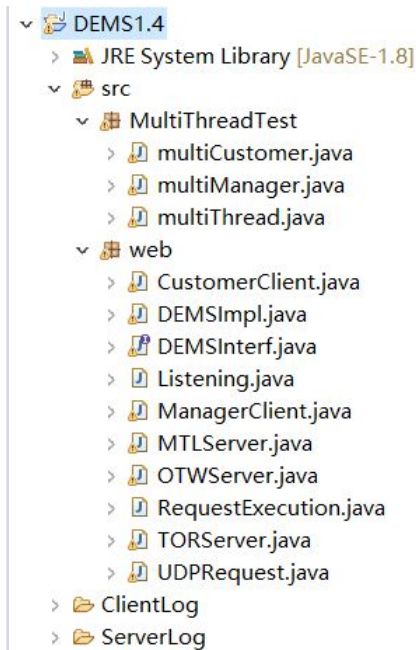

StudentID: 40083064 Name: Yilin Li

## 1. Techniques and architecture

**Techniques:** This assignment implements Web Service via standard network protocols SOAP and uses UDP/IP sockets to achieve inter-server communication.

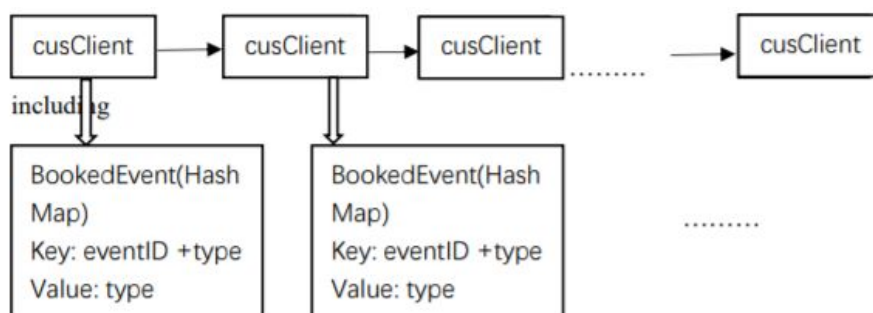

## 2. Project file structure

- (1) Three Servers: MTLServer.java, OTWServer.java, TORServer.java
- (2) Two Clients: ManagerClient.java, Customer.java
- (3) Interface: DEMSInterf.java
- (4) Implementation: DEMSImpl.java
- (5) UDP: UDPRequest.java, RequestExecution.java, Listening.java
- (6) Multithreading test: multiThread.java, multiManager.java, multiCustomer.java
- (7) Logs: ClientLog Folder, ServerLog Folder

### 3. Data structure

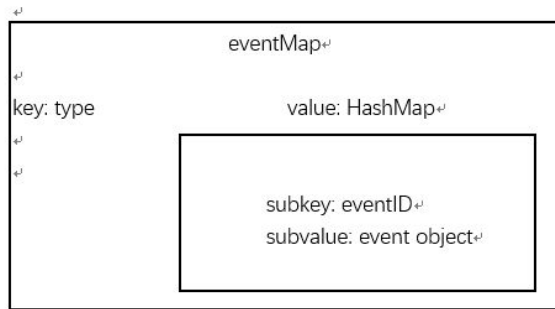

- (1) LinkedList: cusClients
- (2) HashMap: bookedEvent for each customerClient

- (3) LinkedList: manClients

- (4) LinkedList: bookedCus for each event
- (5) Two Level HashMap:

#### 4. Important/Difficult part

The important part of this assignment is adapting the DEMS as the web service via standard network protocols SOAP and using UDP/IP sockets to achieve inter-server communication.

About Web Services, they are software components described via WSDL which are capable of being accessed via standard network protocols such as SOAP over HTTP. And SOAP is a protocol which uses XML for message exchange in support of remote method calls over the Internet. First, the client discovers the service and binds to the server. Next, the SOAP request is built to send the arguments which are needed by the service to the server-side. Then SOAP router routes the request to the appropriate server and server unpacks the request, handles it, computes the result and sent back it in the reverse direction.

About UDP programming, in term of sender, create a Datagram socket and bind it to UDP port, place data in byte array, create a datagram packet and specify data array and receiver's address, and invoke the send method with a reference to the packet; in term of receiver, create a datagram socket and bind it to a port, create a byte array to receive the data, create a datagram packet and specify the data array, and invoke the receive method of the socket with a reference the datagram packet.

#### 5. Test case

| Test ID | Case description                       | Function  | Precondition                         | Test steps  | Input data                  | Expected result        | Test result | What to test             |
|---------|--|-----------|--------------------------------------|---|-----------------------------|------------------------|-------------|--------------------------|
| 1       | TORManager adds a new local city event | Add event | Starts three servers. Manager login. | Choose "add Event". Input eventID, eventType, capacity, topic | TORA070619 conference 10 IT | Add event successfully | As expected | Add new local city event |
| 2       | TORManager adds a                      | Add event | Starts three servers. Manager login. | Choose "add Event". Input                                     | MTLA070619 conference       | Fail to add event.     | As expected | Cannot add another       |

|   |  |                               |   |   |  |   |                |  |
|---|--|-------------------------------|---|---|--|---|----------------|--|
|   | new<br>another<br>city event   |                               |   | eventID,<br>eventType,<br>capacity,<br>topic                                    | ce<br>10<br>IT                           |   |                | city event   |
| 3 | TORManager<br>adds an<br>existing<br>event   | Add<br>event                  | Starts three<br>servers.<br>Manager login.<br>The event<br>exists.  | Choose "add<br>Event".<br>Input<br>eventID,<br>eventType,<br>capacity,<br>topic | TORA07<br>0619<br>conference<br>10<br>IT | Fail to<br>add<br>event.<br>Its<br>capacity<br>plus<br>one. | As<br>expected | Cannot<br>add<br>event<br>existing,<br>but add<br>its<br>capacity                  |
| 4 | TORManager<br>removes<br>a local<br>city event<br>without<br>customer<br>reservation       | Remove<br>event               | Starts three<br>servers.<br>Manager login.<br>The event<br>exists.  | Choose<br>"remove<br>Event".<br>Input<br>eventID,<br>eventType                  | TORA07<br>0619<br>conference             | Remove<br>event<br>successfully                             | As<br>expected | Remove<br>local city<br>event  |
| 5 | TORManager<br>removes<br>an<br>another<br>city event<br>without<br>customer<br>reservation | Remove<br>event               | Starts three<br>servers.<br>Manager login.<br>The event<br>exists.  | Choose<br>"remove<br>Event".<br>Input<br>eventID,<br>eventType                  | MTLA07<br>0619<br>conference             | Fail to<br>remove<br>event                                  | As<br>expected | Cannot<br>remove<br>another<br>city event  |
| 6 | TORManager<br>removes<br>a local<br>event<br>with<br>customer<br>reservation               | Remove<br>event               | Starts three<br>servers.<br>Manager login.<br>Customer<br>login. The<br>event exists<br>and customers<br>booked it. | Choose<br>"remove<br>Event".<br>Input<br>eventID,<br>eventType                  | TORA07<br>0619<br>conference             | Remove<br>event<br>successfully                             | As<br>expected | Remove<br>local city<br>event<br>and<br>cancel it<br>for all<br>customers<br>in it |
| 7 | Manager<br>views the<br>list of<br>event<br>availability                                   | List<br>event<br>availability | Starts three<br>servers.<br>Manager login.  | Choose "List<br>event<br>availability".<br>Input<br>eventType                   | conference                               | Display<br>the list   | As<br>expected | Display<br>the list of<br>available<br>events in<br>one type                       |

|    |  |            |   |  |                                |                         |             |   |
|----|--|------------|---|--|--------------------------------|-------------------------|-------------|---|
| 8  | TORCustomer books a local city event   | Book event | Starts three servers. Customer login. The event exists.   | Customer chooses "book Event". Input eventID, eventType            | TORA070619 conference          | Book event successfully | As expected | Book local city event   |
| 9  | TORManager books event for a local city customer                             | Book event | Starts three servers. Manager login. The event exists. Customer did not book it.                                    | Manager chooses "book Event". Input CustomerID, eventID, eventType | TORC0001 TORA070619 conference | Book event successfully | As expected | Manager helps its local customer to book event                    |
| 10 | TORManager books event for another city customer                             | Book event | Starts three servers. Manager login. The event exists.  | Manager chooses "book Event". Input CustomerID, eventID, eventType | MTLC0001 TORA070619 conference | Fail to book event      | As expected | Manager don't have power to help unlocal customer operate         |
| 11 | TORCustomer books an event in another city, no more than three times a month | Book event | Starts three servers. Customer login. The event exists.   | Customer chooses "book Event". Input eventID, eventType            | MTLA070619 tradeshow           | Book event successfully | As expected | Customer has limitation about the number of booking unlocal event |
| 12 | TORCustomer books an event in another city, more than three times a month    | Book event | Starts three servers. Customer login. The event exists. Customer has booked three other cities events in one month. | Customer chooses "book Event". Input eventID, eventType            | OTWA070619 tradeshow           | Fail to book event      | As expected | Customer has limitation about the number of booking unlocal event |
| 13 | Customer books an event  | Book event | Starts three servers. Customer  | Customer chooses "book   | TORA070619 conference          | Fail to book event      | As expected | When the event is not   |

|    |  |                      |  |   |                       |   |             |  |
|----|--|----------------------|--|---|-----------------------|---|-------------|--|
|    | which has 0 capacity   |                      | login. The event exists. The number of people who booked the event is equal to its capacity. | Event". Input eventID, eventType                          | ce                    |   |             | available, customer can't book this event          |
| 14 | Customer views the booking schedule                            | Get booking schedule | Starts three servers. Customer login.  | Customer chooses "get booking schedule".                  |                       | Display all events booked                   | As expected | Display all events booked of one customer          |
| 15 | TORManager views the booking schedule of local city customer   | Get booking schedule | Starts three servers. Manager login.   | Manager chooses "get booking schedule". Input CustomerID  | TORC0001              | Display all events booked for that customer | As expected | Manager views local customer schedule              |
| 16 | TORManager views the booking schedule of another city customer | Get booking schedule | Starts three servers. Manager login.   | Manager chooses "get booking schedule". Input CustomerID  | MTLC0002              | Fail to get                                 | As expected | Manager cannot view another city customer schedule |
| 17 | Customer cancels a booked event                                | Cancel event         | Starts three servers. Customer login. The event exists. Customer booked this event.          | Customer chooses "cancel event". Input eventID, eventType | TORA070619 conference | Cancel event successfully                   | As expected | Cancel booked event                                |
| 18 | Customer cancels an unbooked event                             | Cancel event         | Starts three servers. Customer login. The event exists.                                      | Customer chooses "cancel event". Input eventID, eventType | TORA070619 tradeshow  | Fail to cancel event                        | As expected | Cannot cancel unbooked event                       |
| 19 | TORManager   | Cancel               | Starts three servers.  | Manager chooses "   | TORC0001              | Cancel event                                | As expected | Manager cancels                                    |

|    |   |              |   |  |   |                          |             |   |
|----|---|--------------|---|--|---|--------------------------|-------------|---|
|    | cancels an event for local city customer  | event        | Manager login. Customer login. The event exists. Customer booked this event.  | cancel event". Input CustomerID, eventID, eventType  | TORA070619 conference                       | successfully             | ected       | events for local customer   |
| 20 | TORManager cancels an event for another city customer   | Cancel event | Starts three servers. Manager login. Customer login. The event exists. Customer booked this event.  | Manager chooses "cancel event". Input CustomerID, eventID, eventType                         | MTLC0002 TORA070619 conference              | Fail to cancel event     | As expected | Manager cannot cancel events for another city customer  |
| 21 | MTLCustomer swaps a new nonlocal event with an old local event when there are three nonlocal events and one local event in booking list | swap event   | Starts three servers. Managers login. Customer login. The events exist. Customer has booked three nonlocal events in a month and one local event. | Customer chooses "swap event". Input new eventID, new eventType, old eventID, old eventType. | TORA070719 conference MTLA070719 conference | Fail to swap events      | As expected | When the customer has booked three nonlocal events in a month, he can not swap a new nonlocal event in that month with an old local booked event. |
| 22 | MTLCustomer swaps a new nonlocal event with an old nonlocal event when there are three  | swap event   | Starts three servers. Managers login. Customer login. The events exist. Customer has booked three nonlocal events in a month.                     | Customer chooses "swap event". Input new eventID, new eventType, old eventID, old eventType. | TORA070719 conference TORE070719 tradeshow  | swap events successfully | As expected | When the customer has booked three nonlocal events in a month, he can swap a new nonlocal event   |

|    |   |            |   |  |  |                     |             |  |
